

# ButtonBind Necklace

**Button Bind Necklace** is a new system which in a few simple steps secure button necks that need to be of a predetermined length. The system is built around a self-vulcanizing tape that is wrapped around the threads holding the button to the garment which is then shaped into a soft neck using tweezers.

## Production

The process is as simple as it is effective. A strip of the self-vulcanizing tape is removed from its card and then stretched to approximately double its length. This action starts the vulcanization process and also makes the tape more flexible and easy to work with. The tape is wrapped around the neck of the button to form a soft necklace. After these few steps it only takes a short while for the tape to vulcanize and after that the button is secured in its place.

## The benefits of Button Bind Necklace.

- *Button Bind Necklace provides the producers, retailers and consumers with a secure system to keep the buttons in place.*
- *By securing buttons to clothes it takes away the need for supplying extra buttons and also greatly reduces customers' claims.*
- *Enhances children's safety and consumer satisfaction*
- *Very easy to apply with a simple tool.*

 *Product of Sweden >>*

**(\*)Vulcanization** or vulcanisation is a chemical process for converting rubber or related polymers into more durable materials via the addition of sulfur or other equivalent "curatives". These additives modify the polymer by forming crosslinks (bridges) between individual polymer chains.[1] The vulcanized material is less sticky and has superior mechanical properties. A vast array of products are made with vulcanized rubber including tires, shoe soles, hoses, and hockey pucks. The process is named after Vulcan, Roman god of fire. Hard vulcanized rubber is known as ebonite or vulcanite and is used to make hard articles such as bowling balls and clarinet mouth pieces.

*How does it work?*

1. Take a strip and pull it to double its length.

2. Tie the strip a few turns around the neck of the thread. Then press it with your fingers to make the material press and vulcanize together.

3. The thread is now fixed and the button will stay in place forever.

one strip (14cm long) can be used for 5-10 pcs of button  
any matching colour is possible
